# Nordic-Baltic Summer School Observational Stellar Astrophysics in the Era of Gaia and Kepler Space Missions

#### Gražina Tautvaišienė

Moletai Observatory
Institute of Theoretical Physics and Astronomy
Vilnius University
2012

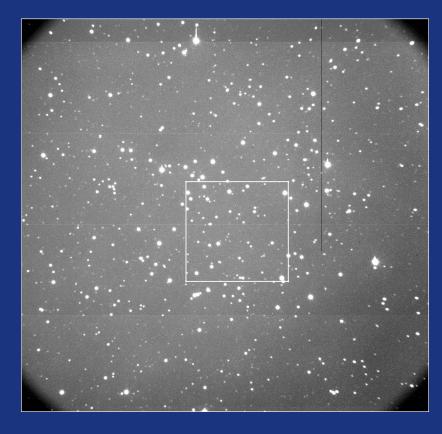

### Nordic-Baltic Summer Schools at Moletai Observatory, Lithuania

- 1999 "Applications of Astrophysical Photometry"
- 2002 "Astrophysics of Interacting Stars"
- 2005 "Looking Inside Stars"
- 2008 "Observational Stellar Astrophysics"

#### Relevance of Summer Schools

- Quite many of participants of the summer schools have never observed with professional telescopes and instrumentation before.
- 2) It is important to be trained on the smaller telescopes before starting to work with the large ones, an observing time of which is expensive.

### Molėtai observatory

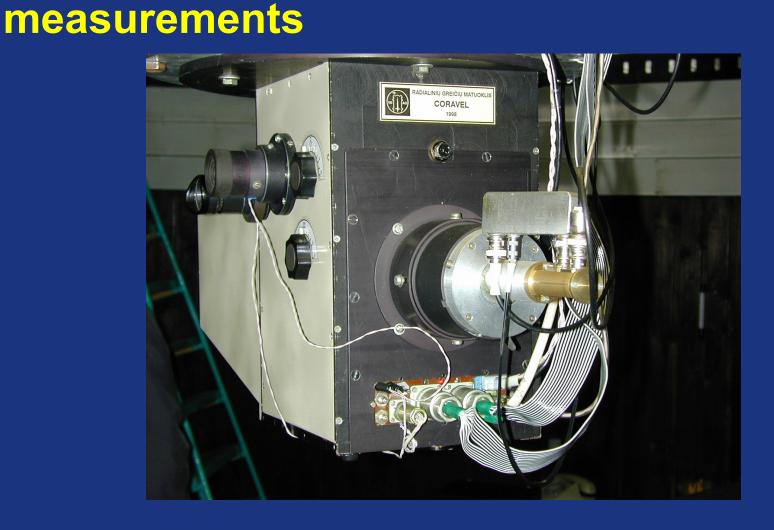

NGC 6811

1.65 m telescope

### 63 cm telescope and instrument of radial velocity

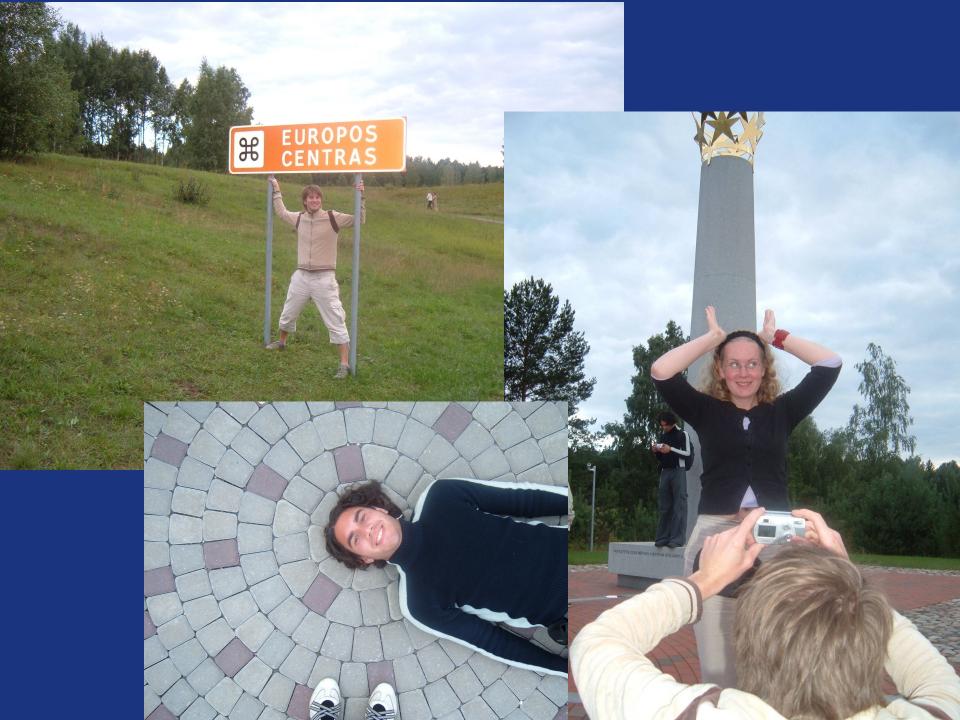

# Sunday excursion to Vilnius

## International collaboration of young astronomers starts by working in mixed pairs

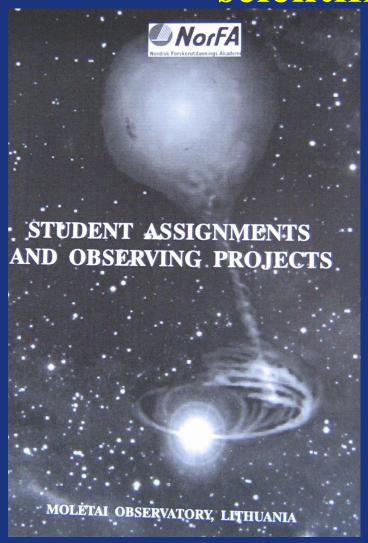

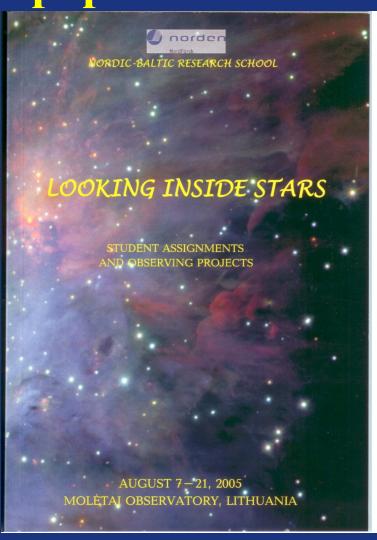

### Training courses give the scientific value

## Additional credits will be received for describing of results in a form of scientific paper

### Advises and requests

- Do not keep windows open when light is on
- Lock doors
- Inform organisers about all your problems
